

# The JOT Odd-Shape 620

Our most versatile, flexible and customizable assembly cell ever.

The JOT Odd-Shape XL

# Fast component placement with high flexibility.

JOT Automation Odd Shape XL is designed for placing components that are out of the standard SMT machines placement range. It is diverse, fast, compact and cost efficient solution for placing odd shape components in demanding production conditions.

Thanks to its modular design, the Odd Shape XL is our most versatile, flexible and customizable Odd Shape machine ever. The changeable feeder table and up to 2 tray feeders allow different custom feeders to be easily changed.

## Key features:

- Automatic component placement cell for odd shaped components
- Accepts different types of component feeders and grippers
- Active / passive clinching
- Modular design, easy to extend
- Easy setup with graphical user interface
- Quick feeder change
- Traceability and production statistics
- 3 segment conveyor belt saves space
- Automatic tool change system – up to 9 tools
- Automatic conveyor width adjustment
- HERMES / SMEMA electrical interface
- Teach pendant
